Software for Subspace System Identification

- D-SR Toolbox for MATLAB Software for efficient subspace system identification based on open as well as closed loop data. The acronym DSR comes from the paper title "Combined **D**eterministic and **S**tochastic System Identification and **R**ealization: DSR-a subspace approach based on observations." by Di Ruscio (1996).

Toolbox licence bought by many major industrial companies in Norway, e.g. Hydro, Norske Skog, Statoil, Kongsberg, Borealis, Predictor etc.

D-SR is also found to give the best model on validation data in comparison with other subspace methods. This is documented in the following papers by:

- Sotomayor, O. A. Z , S. W. Park and C. Garca (2005) Model reduction and identification of wastewatertreatment plants - A subspace approach. Lat. Am. Appl. Res. v.33 n.2 Baha Blanca abr./jun. 2003
- Sotomayor, O. A. Z., Song Won Parka and Claudio Garcia (2003) Multivariable identification of an activated sludge process with subspace-based algorithms
